

COHORT ANALYSIS REPORTING SYSTEM (CARS)

Now that you have your Department of Education cohort extract file, what do you do with it? Analyze it using NSLP's Cohort Analysis Reporting System (CARS)!

With CARS, you can electronically import and compile both cohort and institutional data to help you identify students who are at a higher risk of defaulting at your school.

With just the click of a button, you can access the information you need to discover characteristics and trends of defaulted students at your institution. Find answers to the following questions and more:

- What impact does retention play in your population of defaulted borrowers?
- Is there a certain age group at your institution who tend to default on their loans?
- How are transfer students affecting your cohort default rate?
- Do borrowers with higher loan balances default at a higher rate than others?

Knowing defaulter characteristics and having the ability to identify trends is the first step in developing an effective default prevention plan—with CARS, NSLP makes it easier for you to do!

To learn more about CARS, see a demonstration, or find out how NSLP can help meet your unique default prevention needs, contact your NSLP Regional Director or call 800-735-8778 ext. 6618.

*Helping schools to enhance
their default prevention efforts.*

We guarantee it.
